

Women's Hormonal Balance

Proven natural relief for PMS, Menopause and other problems linked to hormonal imbalance.

Contains proven natural agents to manage menopausal symptoms, PMS, fibrocystic breast disease and may possibly benefit patients with uterine fibroids and endometriosis. With the latest clinical reports warning doctors and women that hormone replacement therapy carries a risk of breast cancer, heart attack and stroke, many women are looking for a safe and effective alternative. The answer is Women's Hormonal Balance. Singly, each ingredient in this formula has independently proven to manage menopausal and PMS symptoms in the doses provided in this formula. Synergistically, these ingredients work extremely well together, providing therapeutic value to balance hormones naturally, without drug interactions. This product has been very successful in the marketplace providing women with a safe and effective alternative to hormone replacement therapy, as well as the management of PMS and other issues involving imbalance of female hormones.

The ingredients in this product can compensate for the low estrogen levels seen in menopause. It helps to minimize or eliminate the hot flashes and related symptoms, while reducing the usual loss of bone density associated with the menopausal phase.

For PMS and other hormone imbalance problems seen in younger women, the ingredients in this product help to counter the over stimulation effects of estrogen— as balancing the estrogen to progesterone ratio, is vital to the management of these conditions. In addition, women taking the birth control pill or women using hormone replacement therapy should take this supplement to help mitigate the adverse side effects associated with these drugs.

Clinical Applications:

PMS management
Management of Menopausal symptoms
Fibrocystic breast disease
